

Netra Forensic Network Investigation Report

Case DEMO-NETRA-SANITIZED-001 | Language English | Risk MEDIUM

Top Finding	Risk	Packets	Sessions	Alerts	Anomalies
Synthetic credential-access simulation	MEDIUM	8	5	2	1

Executive Summary

Netra analyzed packet evidence for case DEMO-NETRA-SANITIZED-001. The highest-level classification is Synthetic credential-access simulation with medium risk. This report is generated from persisted evidence, detection results, anomaly records, protocol summaries, and custody ledger entries.

Evidence Metadata And Integrity

Field	Value
Evidence file	netra-sanitized-demo.pcap
Evidence ID	ev-sanitized-demo
Plain SHA-256	f798804ad21dcb833f16f3da818ff0573d425b28d53d42df84550b50b5877254
Encrypted SHA-256	Not applicable - public synthetic fixture
Manifest hash	Public demo asset
Encryption key ID	Not applicable
Storage URI	/demo/netra-sanitized-demo.pcap

Evidence Normalization

Field	Value
Selected type	Auto-detect
Detected type	PCAP
Normalized type	PCAP
Confidence	99%
Parser used	pcap
Validation	passed
Signals	magic:pcap, extension:.pcap, synthetic:test-net

Suspicious Activity And Threat Detection

Severity	Attack class	Source	Destination	Confidence
medium	Synthetic FTP authentication	192.0.2.12	198.51.100.21:21	88%
low	Synthetic DNS beacon indicator	192.0.2.10	beacon.netra-demo.invalid	72%

Experimental ML-Assisted Anomaly Summary

This experimental model supports investigator triage only. Its output is not a standalone forensic or legal conclusion.

- 192.0.2.12: Synthetic FTP command sequence vs No FTP authentication (82% confidence)

Protocol Decoding And DPI Metadata

Protocol	Sessions	Packets	Risk	Decoded summary
FTP	1	3	medium	Synthetic USER/PASS/RETR sequence for demonstration only.
DNS	1	1	low	Documentation-only .invalid query.

Payload Inspection Clues

Type	Protocol	Risk	Finding
Synthetic command metadata	FTP	medium	Harmless demonstration credentials; no real system or account is referenced.

Traffic Flow Summary

Source	Destination	Protocol	Packets	Risk
192.0.2.12	198.51.100.21	FTP	3	68
192.0.2.10	198.51.100.53	DNS	1	42

Tooling And Zeek Analysis

Tool / Source	Status
tshark	validated
Zeek	unknown
Zeek summary	-
Zeek logs	-

Chain Of Custody

Ledger verified: True | Events: 0 | Latest hash:

f798804ad21dcb833f16f3da818ff0573d425b28d53d42df84550b50b5877254

Time	Actor	Action	Hash status
-	-	No custody ledger events available	-

Legal Review Checklist

Control	Status	Detail
-	complete	All addresses use RFC 5737 TEST-NET ranges and all domain names use .invalid.
-	complete	Experimental ML output assists triage and is not a standalone evidentiary conclusion.

Recommended Next Steps

- 1 Correlate suspicious network activity with endpoint, authentication, firewall, and server logs.
- 2 Preserve original PCAP, manifest, generated report, and exports by hash.
- 3 Do not treat PCAP-only evidence as proof of user attribution without corroborating host evidence.

Limitations: Netra does not decrypt TLS payloads. DPI findings are metadata-derived unless plaintext protocol data is visible in the PCAP.
